

App Hi-fi Prototype

Activation Flow - Mobile

This brings the flow a user would follow to activate their customer's phone using the app on a mobile device. Of note:

- Styling is not finalized, but this example is a good indication of the desired final look.
- This example uses iOS styling, but our goal is to have an app on both iOS and Android.
- This is the simplest activation flow. Customer requirements may add additional screens to the flow (see wireframes)

You can view this document as a fully interactive prototype in-browser using the web link and password below:
